

Deployment Services

Expert Installation, Deployment, and Relocation of Your SGI® Systems

Features

- Three service levels: Hardware Installation, Multi-system Deployment, and System Relocation
- Advice regarding specifications, including appropriate power, environmental, connectivity, and space requirements
- Uncrating and assembly of all components delivered by SGI, including cabling
- Installation of multiple systems, including supported peripherals
- Relocation of multiple systems, including integration into your network
- Testing to validate the functionality of systems and network connectivity

Benefits

- Accelerate productivity: fast setup and redeployment of SGI systems
- Reliability: installation and configuration by experienced SGI engineers who have a vested interest in your success
- Business continuity: minimal interruption of business operations

Hardware Installation: Efficient Setup by SGI Experts

SGI Hardware Installation ensures that your new SGI system is set up promptly and properly to get your new investment up and running fast. An expert SGI support engineer will install your system in an on-site visit.

Some SGI systems are designated as high-end and installable by SGI due to their complexity. We highly recommend purchasing SGI Hardware Installation service for all such systems if it is not already included with the product or your support contract. Because SGI desktop and low-end systems are designed to be customer installable and maintainable, installation is not included with their support contracts or warranties. For these systems, SGI Hardware Installation is available as an optional service.

Multisystem Deployment: Stage, Install, Configure, and Test

Complex systems represent a significant investment for your organization. To maximize your return, you need a solution that brings the pieces together quickly and puts them into production without a flaw. SGI Multisystem Deployment provides just such a solution.

SGI Multisystem Deployment includes on-site staging, installation, basic configuration, and testing of SGI workstations and servers. SGI support engineers will assess your deployment requirements, physically install SGI equipment and software plus supported peripherals, migrate data, and integrate the newly deployed equipment into your existing network topology. Testing is conducted to ensure the quality of your deployment.

System Relocation: Expert Deinstallation and Reinstallation

For relocating existing SGI systems and their related peripherals and software, SGI System Relocation provides a reliable, turnkey solution that minimizes costly downtime and delays. Experienced technicians stage and coordinate the logistics of your entire move—from deinstalling your equipment and overseeing packaging to reinstalling, reconfiguring, and testing. The service includes migration of system data and integrating systems into your network. Your move is completed on time, getting you back to business as usual with maximum efficiency.

SGI Managed Services

SGI Managed Services include a broad range of product-focused services to maximize system performance and accelerate productivity. Services include hardware installation, system deployment, implementation, and on-site and remote system management. Each service is delivered by an experienced SGI engineer.

SGI Technology Solutions

SGI Technology Solutions are empowering a world of innovation and discovery by providing top-performance systems, solutions, and services to the world's leading technical and creative users. With exceptional expertise in high-performance computing, advanced visualization, and the management of complex data, our specialists have the resources and skill sets to architect, implement, and support the most effective technology solutions for the 21st century.
